National Geographic Readers: Caterpillar To Butterfly

Synopsis

Butterflies are all around us. It's hard to believe these majestic insects with impressive wingspans and beautifully colored and patterned wings were once creepy crawly caterpillars. How in the world does this transformation happen? This Level 1 Reader gives kids an up-close look at exactly how a caterpillar becomes a butterfly. With bonus information including different types of butterflies and poisonous caterpillars, this reader is one of a kind. This high-interest, educationally vetted series of beginning readers features the magnificent images of National Geographic, accompanied by texts written by experienced, skilled children's book authors. The inside back cover of the paperback edition is an interactive feature based upon the book. Level 1 books reinforce the content of the book with a kinesthetic learning activity. In Level 2 books readers complete a Cloze letter, or fun fill-in, with vocabulary words. National Geographic supports K-12 educators with ELA Common Core Resources. Visit www.natgeoed.org/commoncore for more information.

Book Information

Lexile Measure: 0400 (What's this?)

Series: Readers

Age Range: 4 - 6 years

Grade Level: Preschool - 1

Customer Reviews

LAURA MARSH is a long time contributor to National Geographic Children Books. She has written a large number of books in National Geographic Readers series and also in Mama Mirabelle and

Toot and Puddle series.

Bought this to go with our caterpillar to butterfly project. My 3 yr old grand-daughter was fascinated to learn about their transformation. We read the book when we received our "cup of caterpillars," then we kept referring back to the pictures throughout the weeks, as they formed into chrysalides, then into butterflies. Great book with plenty of photographs. Good for teaching.

My 2 year old LOVES this entire series of Nat. Geo Readers... I have purchased about 25 different titles, "pre-readers" as well as Level 1 & 2 readers. She loves them all & will ask for certain ones. The "pre-readers" level books are extremely simple & great because she memorizes the words & can "read" it herself. We love the more advanced ones too, because there is more information to talk about. I have learned quite a few facts, myself!) What a great series. The price is reasonable & pictures are great. These are really getting her interested in nature, animals & science... I will continue to buy these as they are released, for our collection!

The pictures are great but contains approximately 15 or so pages. I would have appreciated more science and important facts.

I have liked all of the National Geographic readers. We got this one when I did a live butterfly habitat with my 6 yr old as a homeschool science project and it made a very nice lesson. Beautiful pictures, good vocabulary, great explanations of the life cycle and shows a lot of different types of butterflies with their names (important because we always want to know!) These books also make good beginning readers for when your child moves into that stage of reading. Great purchase!

I bought this book to go along with a Backyard Safari Butterfly Habitat and turned it all into a memorable project with my Grandsons. They were amazed to see the transformation from caterpillar to Chrysalis to Butterfly. You can't beat it!

Loved it as a gift. Purchased the butterfly kit and it turned out to be one of the best gift ever for my 6 year old grandkids

This is a very informative book for kids about the life cycle of butterflies. It is just a basic knowledge of butterflies in general, no info on different colors/names of the different butterflies, my 4 1/2 year

old grandson was wanting to know about when we saw the 1st butterflies of the season in the back yard while he was playing in his sand box. It turned out that the ones we saw were actually a yellow swallowtail/male and black swallowtail/female and a small black butterfly/baby. I finally found that info on the internet.

I used this book to help teach about the lifecycle of a butterfly! This book is very clear and easy to understand, great for kids!
