Web GIS: Principles And Applications

Synopsis

The Web has revealed the immense value and broad applicability of GIS, set the bar for today's user expectations, and introduced flexible architectures for use with modern IT infrastructure. From basic architecture to new frontiers, *Web GIS: Principles and Applications* presents a thorough overview of the origins and developments in this emerging platform. New Web technologies addressed include: ArcGIS Server, REST services, JavaScript API/Flex API, and ArcGIS Mobile. This book offers a balance of principles, concepts, and techniques to provide you with an understanding of how Web GIS can revolutionize the way your GIS functions.

I am disappointed with this purchase. I was under the impression this book would cover material in depth and that it would have explicit examples.

This is an amazing book focused on web application GIS. Needed it for a grad school course. Worth every penny.

this book is more about concept rather than specific example, so if you do not understand what internet mapping do, its a good starting book

This book provides a good overview and patterns about GIS technologies and development. It is very good for a beginner.

Everything I expected.

This book is one of my ever best books related to GIS. Am enjoying reading it and implementing some ideas mentioned in the application section. I strongly recomend it to everyone who wants to understand the basics and structure of Web GIS.

this was a required textbook.less expensive than campus book store.like most textbooks, informative.all aspects of the transaction were satisfactory.

From basics to advanced features, WEB GIS reviews the origins and applications of web-based GIS systems, from GeoDesign and mobile GIS to mashups, geoportals, and more. The basics involved in expanding the Web to incorporate and modernize GIS technology makes for a powerful survey by a senior GIS application developer who has lead numerous GIS application projects in many industries. Any collection strong in GIS systems must have this!
